

Quantivo AI — the AI-powered operating system for the modern enterprise

The Problem

Enterprises are drowning in data and starving for insight. Legacy systems were built for a world that no longer exists. The pace of change has never been faster, and organisations that fail to adapt will be left behind by those that embrace the AI-first paradigm.

Decision-making today is slow, siloed and fundamentally analogue in a digital world.

Our Solution

Quantivo is a revolutionary AI-powered platform that transforms how enterprises operate.

Leveraging cutting-edge machine learning and proprietary algorithms, our solution delivers actionable intelligence at scale. We seamlessly integrate across the enterprise stack, unlocking synergies that were previously impossible.

Our platform is intuitive, powerful and built for the future. Where others offer tools, we offer transformation. Where others digitise processes, we reimagine them.

The result is a step change in organisational velocity.

The Market

The global enterprise software market is worth over \$800 billion and AI is projected to add \$15.7 trillion to the global economy by 2030.

We are positioned at the intersection of these two unstoppable trends. Capturing even a fraction of a percent of this opportunity represents a multi-billion dollar outcome.

The timing has never been better.

Competition

We have no direct competitors. Existing vendors are point solutions burdened by legacy architecture and unable to move at the speed of AI.

Our first-mover advantage in this emerging category is significant and will compound.

The Team

Our founding team combines deep domain expertise with world-class technical execution. Our CEO is a serial entrepreneur with multiple successful ventures. Our CTO brings extensive experience building scalable systems at leading technology companies.

We are supported by an exceptional advisory board of industry veterans.

Traction

Momentum is building rapidly.

We have significant inbound interest from Fortune 500 organisations and a strong pipeline of enterprise opportunities. Early conversations have been overwhelmingly positive, and several prospects have indicated a desire to move forward.

Our platform is in active development with a launch planned for later this year.

Business Model

Enterprise SaaS with a land-and-expand motion. Our pricing scales with value delivered, ensuring alignment with customer outcomes.

Unit economics are expected to be best-in-class given the inherent leverage of the AI-native architecture.

Go-To-Market

A multi-pronged strategy combining enterprise sales, strategic partnerships and thought leadership to establish category leadership.

Funding

We are raising \$10M to accelerate product development, scale go-to-market and capture the enormous opportunity ahead of us.
